Laura González Comalada

FULL-STACK SOFTWARE ENGINEER

lauragonzalezcomalada@gmail.com +34 606272914

Full-Stack Engineer with experience owning and delivering end-to-end SaaS products, from requirements gathering and technical design through implementation, deployment and long-term maintenance. Experienced in designing scalable backend architectures, building modern frontend applications, integrating third-party services and collaborating closely with product stakeholders to turn business requirements into production-ready solutions.

2025 - Present Kee Technology Solutions

Own the development of end-to-end SaaS features, leading projects from product discussions and technical design through implementation, deployment and ongoing maintenance.

- Lead full-stack features delivery from requirements gathering through production deployment.
- Design scalable backend APIs, PostgreSQL schemas and authentication flows.
- Architect and implement frontend experiences using Nuxt, Vue and TailwindCSS.
- Lead integrations with external APIs and third-party SaaS platforms.
- Collaborate directly with product stakeholders to define technical solutions and implementation strategies.
- Troubleshoot production issues, optimize existing systems and continuously improve application architecture.
- Contribute to technical decision making and code quality across the engineering team.

2023 Okify

Built and delivered full-stack solutions for internal platforms and customer-facing SaaS applications.

- Designed backend services, database schemas and REST APIs.
- Integrated third-party services and external APIs.
- Implemented authentication and authorization using JWT and role-based access control.
- Collaborated in agile development, code reviews and cross-functional product discussions.

TECH STACK

Frontend

Nuxt
Vue.js
React
JavaScript
TypeScript
TailwindCSS

Backend

Node.js
Nitro
Python
Django
REST APIs
LLM Integration (Anthropic Claude APIs)

Database

PostgreSQL
SQL
Supabase

Core Competencies

API Design
Database Design
System Design
Third-party Integrations
SaaS Development
Agile Development

EDUCATION

Telecommunications Technologies and Services Engineering
ETSETB - Barcelona Tech

Bachelor Thesis
Leibniz Universität Hannover

LANGUAGES

Spanish
English
Catalan
French

2022 Gaming Labs International

Validated online gaming platforms against international regulatory and compliance standards.

- Designed and executed functional, integration and non-functional test plans.
- Identified software defects, validated system stability and collaborated with engineering teams to improve product quality.
- Analyzed software requirements and contributed to improving testability and release readiness.

HIGHLIGHTED PROJECTS

AI-powered Contract Processing Platform

Anthropic Claude • AI • CRM Integration

Architected an AI-powered document processing platform using Anthropic Claude to extract structured information from real estate contracts, automate data validation and synchronize extracted data with CRM platforms.

CRM & Third-party Integrations

Designed and implemented integrations with external SaaS platforms including Follow Up Boss, Google Places, Square and Contentful, building secure authentication flows and data synchronization between systems.

Dynamic Form Builder

Dynamic Forms • Conditional Logic • CRM Sync

Built a configurable form platform enabling non-technical users to create dynamic forms with reusable components, conditional logic and automatic CRM synchronization.

Local Events & Community Platform

Maps • Geolocation • Ticketing

Created a full-stack platform enabling users to publish local events and projects, manage ticket sales, track attendance and discover nearby activities through interactive map-based search.

Forensic Report Automation Platform

PDF Generation • Automation • Workflow

Developed a configurable document generation platform that transforms structured form submissions into production-ready forensic and expert witness reports in PDF format, streamlining report creation and reducing manual work.
